## “Thanksgiving Highlights”

Lambert's Main Terminal has a new glow from a new LED lighting system.

Lambert has a new highlight for travelers with its new LED lighting system in the Main Terminal. From sunset to sunrise, passengers can now see a rainbow of colors reflect from the recently renovated skylights in the Ticketing Level. The lights, turned on for the first time during Thanksgiving week, accentuate the historic modernist architecture of Lambert's iconic domes. They're also more energy efficient than the previous lighting system. The lighting system was installed as part of Lambert's dome restoration project completed earlier this year.
