

Technical input to date: Definition of each

Needs Assessment: The Update is currently in the Needs Assessment phase. The Inventory of Existing Conditions (airfield, terminals, roadways, parking, facilities, and more) and Aviation Activity Forecasts are underway. The Federal Aviation Administration (FAA) will review the forecasts. Upon FAA approval of the forecasts, facility requirements will be assessed, to inform on potential gaps and areas for improvements. A Technical Advisory Committee (TAC) will be convened to review the needs assessment and forecasts and identify additional input needed for potential solutions.

Evaluation of Potential Solutions: Improvement alternatives will be developed and evaluated by the STLAA and reviewed by the FAA and the Update's TAC. A preferred Airport Development Plan will be selected.

Refinement of Plan: Once a preferred Airport Development Plan is selected, environmental and financial analyses will ensure the plan is implementable. Finally, the Update's findings will be documented in a final report, which will present the 20-year vision and identify short- and long-term improvements.
